

LogiMAT 2024: Customized heavy-duty shelving for efficient warehouse logistics produced with respect for nature

Tegometall, a leading provider of innovative warehouse solutions, will be presenting its pioneering TegoStock heavy-duty shelving range at LogiMAT 2024 in Stuttgart from March 19th to 21st. The company is setting new standards in warehouse management for businesses faced with the challenges of limited space, clutter and rising operating costs. The company's trade fair appearance this year is all about sustainability and efficiency in warehouse logistics.

Space efficiency with TegoStock heavy duty storage racking

In response to the ever-increasing demands for faster goods handling in industries such as retail and shipping, Tegometall is presenting individually configurable heavy-duty shelving that makes efficient use of both horizontal and vertical space. Dr. Arndt Lüdtkke, Managing Director of Tegometall, emphasizes the importance of high storage performance for competitiveness and customer satisfaction: "The optimal use of available storage space is crucial to maximizing storage capacity and improve operational efficiency."

Innovative design for different requirements

TegoStock heavy duty storage racking offers a versatile range of configurations to accommodate different space requirements and a variety of products in terms of shapes, sizes and weights. The manufacturer provides a selection of specialized rack uprights, beams, floor fixings and spacers to enable bespoke solutions. These racks can be configured for conventional wide aisle pallet racking, double deep storage in smaller areas or very narrow aisles (VNA) with rack heights of up to 16 meters.

More than just racking: complete storage solutions

Efficient warehouse logistics and productive workflows require more than just a versatile and durable shelving system. Tegometall goes above and beyond, offering comprehensive project support from initial 3D planning to professional installation. In addition, the company offers training courses at its training center in Krauchenwies to train assembly teams and warehouse specialists in the safe handling of heavy-duty racking. Tegometall's commitment extends to annual racking inspections to ensure compliance with DIN EN 15635 standards, with certified inspection personnel available for this purpose.

The infrastructure advantage of Tegometall

Dr. Lüdtkke emphasizes Tegometall's unique position: "We not only distinguish ourselves as a manufacturer and service provider, but also manage an extensive inventory." Supported by highly automated production facilities and an on-site coil slitting line, Tegometall guarantees product availability and short delivery times, even for large orders. This infrastructure enables the company to think beyond conventional storage principles and constructively develop the concept of "little space, lots of space".

Experience TegoStock and more at LogiMAT 2024

Tegometall invites visitors to explore the TegoStock heavy-duty shelving range and other innovative storage solutions at LogiMAT 2024 in Stuttgart from March 19 to 21. The Tegometall team will be available for questions and discussions in Hall 5 at Stand 5F70.
